

bhiThe **ParaPro EQ20** Range**bhi**with **Audio DSP**
& **Parametric Equalisation**

20W high-performance audio processing..
..with parametric audio equalisation..
..for a great listening experience!

- **DSP noise cancelling version for “noise free” audio**
 - **Use in-line with speakers or headphones**
 - **Easy to use with simple control of all functions**
 - **Greatly benefits those with hearing loss**

Boost your audio to suit your own hearing!

Introduction:

The bhi **ParaPro EQ20** audio DSP range has a high performance audio processing system with a 20W audio amplifier and parametric equalisation. Unlike standard tone control, graphic equalisation and preset EQ settings a parametric equaliser allows you to fine-tune your audio to suit to your own hearing, especially useful if you suffer hearing loss. Four models are available including the option of our world-class DSP noise cancelling technology and Bluetooth connectivity. You can boost or cut specific frequencies from 100Hz to 10KHz by up to ± 10 dB. The **EQ20-DSP & EQ20B-DSP** models have the latest bhi DSP noise cancelling technology, which distinguishes speech from noise across the whole audio bandwidth resulting in clear intelligible speech under most conditions, making your listening experience much more enjoyable. Bluetooth connectivity is an option on the **EQ20B & EQ20B-DSP** effectively turning your **ParaPro EQ20** unit into a Bluetooth speaker.

bhi ParaPro EQ20 Range Features:

- ◆ Powerful high-performance audio processing system
- ◆ Parametric equaliser lets you adjust the audio to suit your own hearing
- ◆ bhi's world-class DSP noise cancelling technology
- ◆ Greatly benefits those with hearing loss
